58-990 2" Late Model Belt Drive, Billet, Black. Revised 11-26-24

Assembly Diagram and Assembly Reference Ultima® Late Model 2" Belt Drive Units

Warranty Provisions

Ultima's component parts used in our Belt Drives are guaranteed to the original purchaser to be free of manufacturing defects in materials and workmanship for a period of Twelve (12) months from the date of purchase through Midwest Motorcycle Supply.

Merchandise that fails to conform to these conditions will be repaired by Ultima if the parts are returned to Midwest Motorcycle Supply by the purchaser within the 12-month warranty period or within 10 days thereafter. Some problems can be rectified by a telephone call and need no further course of action. A part that is suspected of being defective must not be replaced by a Dealer without prior authorization from Midwest Motorcycle Supply. If it is deemed necessary for Ultima to make an evaluation to determine whether the part was defective, it must be packaged properly to prevent further damage and be returned prepaid to Midwest Motorcycle Supply with a copy of the original invoice of purchase and detailed letter outlining the nature of the problem, how the part was used and the circumstances at the time of failure. If, after an evaluation has been made by Ultima and the part was found to be defective, repair or replacement will be granted at Ultima's discretion.

Additional Warranty Provisions:

- 1. Ultima shall have no obligation in the event an Ultima part is modified by any other person or organization.
- **2.** Ultima shall have no obligation in the event an Ultima part becomes defective in whole or in part as a result of improper installation, improper maintenance, improper use, abnormal operation, or any other misuse or mistreatment of the Ultima part.
- **3.** Ultima shall not be liable for any consequential or incidental damage resulting from the failure of an Ultima part, the breach of any warranties, the failure to deliver, delay in delivery, delivery in non-conforming condition, or for any other breach of contract or duty between Ultima and a customer.

Read Before Beginning Installation

Professional Installation Requirements:

Ultima Belt Drives should be installed by trained professional mechanics into motorcycle in which they were intended for use. Failure to do so may result in injury and even death. It is the customer's responsibility to insure their mechanic has proper training.

Preparation for Assembly

Before installing the Ultima Belt Drive System you must remove your entire existing primary drive. This also includes removing the pressed on transmission mainshaft race used with chain drive inner primary bearings. At this time we suggest inspection of your Charging System. This is also a great time to inspect the transmission sprocket and seal for wear and to ensure the sprocket is tight. Always disconnect the battery negative cables when performing any primary drive maintenance.

1. Unplug Battery Negative Cables

Remove stock primary drive per the manufacturers guidelines. Remove inner primary bearing race from transmission main shaft.

Install OEM inner primary to engine gasket.

Install clutch basket assembly onto the transmission mainshaft.

2. Install the appropriate supplied motor plate bearing & circlip for your application into the motor plate. 07-earler / 08-later models use different bearings.

4. Install the motor plate & install the mounting bolts using red threadlocker. Torque to manufacturers specs.

4A.

At this time, you will reinstall your starter to the motor plate.

Install & torque mainshaft nut to 55-65 ft-lbs using red thread locker.

8. Verify alignment of the two pulleys & shim front motor pulley if necessary. (2 spacers included with kit)

10. Ultima 2" belt drives utilize 8 steel & 8 friction plates. When installing the clutch pack, install the thick .119" steel plate first then alternate friction & steel. The last plate you should install should be fiber/friction.

7. Install front motor pulley & belt.

Install & torque the OEM compensator bolt to manufacturers specs. Always clean bolt thoroughly and apply red thread locker before installing.

11. Install the clutch adjusting screw using a small amount of high temp grease or antisieze on the threads & on the clutch pushrod end.

12. Align the witness marks on the pressure plate and inner clutch hub as shown when installing pressure plate. This will ensure clutch hub studs will be centered in the appropriate pressure plate holes.

NOTE: CENTER PUSHROD IS REQUIRED

The center clutch push rods (located in the transmission main shaft) may need to be changed depending on setup. Below is a list of availble sizes.

| PART# | LENGTH | DESCRIPTION | | | | |
|--------|----------|-------------------|--|--|--|--|
| 96-442 | 11.375" | 1987-1989 5 speed | | | | |
| 96-538 | 10.8125" | 1990+ 5 speed | | | | |

After installing pressure plate, install clutch springs w/supplied spring collars and narrow-headed 12-24 bolts. Install using Blue Locktite. Spring collars should bottom on clutch hub studs. Torque to 90 in-lbs. In higher horsepower applications, heavier springs are available.

Midwest Part#96-251 (68lbs @ 1")

Midwest Part#96-249 (82lbs @ 1")

Midwest Part#96-250 (98lbs @ 1")

Install the chromed belt guide using blue thread locker on the bolts.

Install the starter jackshaft cover using blue thread locker on the bolts.

16. Install the motor pulley cap using blue thread locker on the bolts.

17. At this time you will adjust the clutch at the basket. Once that has been completed, remove any excess freeplay at the lever by adjusting the clutch cable.
